# Building for the Future: Developing a Maintainable Code Base

What is the problem?

How do we solve it?

## Topics in this presentation

Create a Standardized Environment

Manage Wordpress Core and Plugins

Compile Assets with a Taskrunner

Write Clean Code

# Create a Standardized Environment

<https://github.com/KAndrews101/Wordpress-Baseline>

## What do you mean by “Standardized Environment”?

Your team will be in sync

Project setup is  
always the same

Less time fixing bugs

## Tools we can Leverage

HashiCorp

**Vagrant**

<https://www.vagrantup.com/downloads.html>

**VirtualBox**

<https://www.virtualbox.org/wiki/Downloads>

**CHEF**

<https://downloads.chef.io/chefdk>

**Trellis**

<https://roots.io/trellis/>

<https://github.com/KAndrews101/Wordpress-Baseline>

## The Benefits of Using a Virtual Machine

- Fast onboarding of new developers
- Reduces repetition
- Mimic hosted environments
- Identical environment for everyone
- Time spent up front is time saved later

## The Drawbacks

- Initial setup can take some time
- Requires sufficient RAM on your machine
- Have to host a staging environment
- Team has to maintain their own system dependencies(Vagrant, VirtualBox, Chef)

# Create a Standardized Environment

Your Wordpress Project > cookbooks  
> wordpress > recipes > default.rb

```
execute "install_nginx" do
  user "root"
  action :run
  command "sudo rpm -Uvh
  http://nginx.org/packages/centos/...
end
```

Your Wordpress Project > Vagrantfile

```
Vagrant.configure(2) do |config|
  config.vm.box = "bento/centos-7.4"
  config.vm.hostname = 'wordpress'
  config.vm.network :private_network, ip: '172.16.231.130'
  config.vm.network :forwarded_port, guest: 80, host: 8080
  config.vm.network :forwarded_port, guest: 9200, host: 9201

  config.vm.provider "virtualbox" do |v|
    v.memory = 2048
  end
  config.vm.provision "chef_solo" do |chef|
    chef.run_list = [
      "recipe[wordpress]"
    ]
  end
end
```

## Vagrant Commands

vagrant up

vagrant ssh

[vagrant@wordpress ~]\$ cd /vagrant

vagrant reload

vagrant destroy

vagrant global-status

vagrant provision

```
.field_information {cursor: pointer; float: left; margin: 1px 0 0 5px;}
.field_information_container {float: left; }
.label {font-size: 82% !important;}
.btn_copy_text {width: 110px;}
#btn_get_first {width: 110px;}

.title {width: 701px !important;}
.description {width:701px !important; height: 73px !important;}

.tag-editor {line-height: 25px !important; height: 25px; padding: 5px 0px !important; border: 1px solid #ccc !imp
.tag-editor-delete {height: 25px !important;}
.tag-editor-delete i {line-height: 25px !important;}
.tag-editor-spacer {width: 10px !important;}

#btn_settings {width: user-select: none; #html: user-select: none; #body: user-select: none; #o: user-select: none;
#btn_settings:hover {cursor: pointer; transform: rotate(180deg); transition: all 0.5s ease-out 0s;}

#select_these_container {width: 298px;}
#google_api_key {width: 400px;}
#get_first_n_value {width: 50px;}
.simple_text {text-decoration: none !important;}
.panel-settings {padding: 10px !important;}
.panel-settings-container {margin-bottom: 5px !important;}

#google_translate_api_info {font-size: 10px; margin-left: 35px;}
.checkbox_comment {font-size: 10px;}
.btn-default .badge {margin-left: 3px; border-radius: 5px !important;}
mark {padding: 0 !important;}

#add_and_translate {font-size: 10px;}

.tooltipster-box {background: #fff !important;}
.tooltipster-arrow-background {border-top-color: #fff !important;}
.tooltipster-box {width: box-shadow: 0 1px 4px rgba(0,0,0,.2); box-shadow: 0 1px 4px rgba(0,0,0,.2)}
.tooltipster-arrow{height:10px !important;}
.tooltipster-content {margin: -2px 0px !important; }
```

# Manage Wordpress Core and Plugins

<https://github.com/KAndrews101/Wordpress-Baseline>

## What's the Problem?

Updating Wordpress and plugins through the admin panel is dangerous!

<https://github.com/KAndrews101/Wordpress-Baseline>

## Download and Configure Bedrock

Roots

Bedrock

<https://github.com/roots/bedrock>

Your Wordpress Project

src

.env

```
DB_NAME=wordpress
DB_USER=root
DB_PASSWORD=root

WP_ENV=development
WP_HOME=http://172.16.231.130
WP_SITEURL=${WP_HOME}/wp
```

<https://github.com/KAndrews101/Wordpress-Baseline>

## Install and Manage Project Dependencies with Composer

<https://getcomposer.org/download/>

```
Your Wordpress Project$ vagrant ssh
```

```
cd /vagrant/src && composer install
```

<https://wpackagist.org/>

```
composer require wpackagist-plugin/plugin-name
```

```
composer remove wpackagist-plugin/plugin-name
```

```
composer update
```

```
Your Wordpress Project > src > composer.json
```

```
"roots/wordpress": "5.*",  
"roots/wp-config": "1.0.0",  
"roots/wp-password-bcrypt": "1.0.0",  
"wpackagist-plugin/custom-post-type-ui": "*",  
"wpackagist-plugin/simple-page-ordering": "*",  
"wpackagist-plugin/ninja-forms": "*",  
"wpackagist-plugin/wordpress-seo": "*"
```

# Compile Assets with a Taskrunner

<https://github.com/KAndrews101/Wordpress-Baseline>

**This is a PSA. STOP Using CSS.  
START Using a CSS Preprocessor.**

Sassquatch.ca

<https://github.com/KAndrews101/Wordpress-Baseline>

## Installing Development Dependencies

<https://nodejs.org/en/download/>

```
npm install gulp-cli -g
```

 package.json

```
{  
  "devDependencies": {  
    "dotenv": "^4.0.0",  
    "gulp": "^3.9.0",  
    "gulp-autoprefixer": "^4.0.0",  
    "gulp-concat": "^2.6.0",  
    "gulp-notify": "^3.0.0",  
    "gulp-plumber": "^1.1.0",  
    "gulp-rename": "^1.2.2",  
    "gulp-sass": "^3.1.0",  
    "gulp-uglify": "^3.0.0",  
    "gulp-wrap": "^0.15.0",  
    "gulp-insert": "^0.5.0"  
  }  
}
```

```
npm install
```

```
npm install gulp-sass --save-dev
```

<https://github.com/KAndrews101/Wordpress-Baseline>

## Building and Running Gulp Tasks

 gulpfile.js

```
var // Package Variables
    dotenv = require('dotenv').config({path: '.env'}),
    gulp = require('gulp'),
    sass = require('gulp-sass'),
    uglify = require('gulp-uglify'),
    autoprefixer = require('gulp-autoprefixer'),
    concat = require('gulp-concat'),
    rename = require('gulp-rename'),
    plumber = require('gulp-plumber'),
    notify = require('gulp-notify'),
    insert = require('gulp-insert'),
    // Environment Variables
    srcPath = process.env.SRC_PATH,
    assetPath = process.env.ASSET_PATH,
    styleName = process.env.STYLE_NAME,
    scriptName = process.env.SCRIPT_NAME;
```

```
gulp.task('default', ['sass', 'scripts', 'watch']);

gulp.task('build', ['sass', 'scripts']);

// Compiles both unminified and minified CSS files
gulp.task('sass', function () {
  gulp.src(srcPath + assetPath + '/styles/' + styleName + '.scss')
    .pipe(plumber())
    .pipe(sass({
      outputStyle: 'expanded',
      includePaths: ['node_modules']
    }))
    .on('error', onError)
    .pipe(autoprefixer({
      browsers: ['last 100 versions'],
      cascade: false
    }))
    .on('error', function (err) {
      console.log(err.message);
    })
    .pipe(sass({
      outputStyle: 'compressed'
    }))
    .pipe(rename(styleName + '.min.css'))
    .pipe(gulp.dest(srcPath + assetPath + '/styles/min'));
});
```

Run your tasks

gulp

gulp sass

# Write Clean Code

<https://github.com/KAndrews101/Wordpress-Baseline>

## What can we do to Improve the Quality of our Code

- Be as modular as possible
- Limit use of plugins
- Standardize syntax
- Document your code

## Making Your Code Modular

```
/* THEME COMPONENTS
-----+*/
@import "components/lists";
@import "components/tables";
@import "components/buttons";
@import "components/widgets";
```

### Use a CSS Naming Convention

<http://getbem.com/naming/>

```
.button{
    &__icon{
        }
    &--has-icon{
        }
}
```

<https://github.com/KAndrews101/Wordpress-Baseline>

## Making Your Code Modular

The Theme

partials

functions

page-templates

post-templates

```
function get_post_type_templates($single_template) {  
    global $post;  
  
    $single_template = dirname( __FILE__ ) . '/post-templates/single-' . $post->post_type . '.php';  
  
    return $single_template;  
}  
  
add_filter( "single_template", "get_post_type_templates" );
```

functions.php

```
$partials = WP_CONTENT_DIR . '/themes/sassquatch/functions/';  
  
require_once $partials . 'config.php';  
require_once $partials . 'widgets.php';  
require_once $partials . 'svg.php';  
require_once $partials . 'appearance.php';  
require_once $partials . 'menus.php';
```

front-page.php

```
<?php get_template_part('partials/latest-news'); ?>
```

## Limit Use of Plugins

### Too Many Plugins

- Difficult to keep track
- Slows down your site
- May create redundancies
- Increased chance of conflicts

**Audit any plugins you do use**

# Document Your Code

Without documentation, people will get lost

- Readme.md
- Inline Comments
- Hosted webpage
- Well written code can document itself

# Conclusion

# Thank you!
